Workflow: build layer list and change layer visibility/opacity

EarlyDike Geoportal start

The json file will be fetched at the very beginning. So it can be accessed all the time

fetch

GIAGS_config.json

create

App.vue

create

WMSLayer.vue

belongs to group?

Yes

No

groupLayerSwitch.vue

singleLayerSwitch.vue

user event:
layer switch on/off
opacity change

take apart the group and handle the layers in this group as single layer

mutations.js

call corresponding set functions in mutations.js

layer visibility/opacity changed
